- What corrections did you have to make?
 - I added some alt text attributions to the artist cards and aria labels to the control buttons, and also added a language to the top of the html document.
- Do you think your website is usable if you turn off the CSS? Why or why not?
 - Probably not.... The grid system and responsive web components enable the website to be formatted with the artist cards in their specific positions. Because there is no JavaScript added to the code, there isn't really anything that is broken or doesn't work, it just wouldn't have the same design specifications that would be recognizable as Spotify.
- Is your site tabbable? In other words, without the use of the mouse, are all the links and buttons accessible using the tab key?
 - Yes!
 -
